

Threat Model Report: hospital patient system

Total Threats: 3

1. [HIGH] Process Identity Spoofing

STRIDE Category: Spoofing

Component: patient api

Description: An attacker could impersonate this process to other components.

Mitigation: Implement mutual authentication (mTLS, API keys, OAuth2).

2. [HIGH] Process Input Tampering

STRIDE Category: Tampering

Component: patient api

Description: Inputs to this process may be manipulated to alter behavior.

Mitigation: Validate and sanitize all inputs. Use integrity checks (HMAC).

3. [HIGH] Privilege Escalation via Internet-Facing Process

STRIDE Category: Elevation of Privilege

Component: patient api

Description: Internet exposure increases the attack surface for privilege escalation.

Mitigation: Apply least privilege, use containerization, and WAF protection.
